Profile

Senior Full-Stack Engineer with 9+ years of experience building scalable web applications, modern frontends, distributed backends, and AI powered & cloud-native platforms. Specialized in JavaScript/TypeScript and Python, with a strong background in DevOps, AWS, and complex feature development. Adept at collaborating with cross-functional teams, delivering high-impact solutions, and driving technical excellence across the full software lifecycle.

Education

Bachelor's degree in computer science, *Eindhoven University of Technology* 04/2010 – 11/2015

Skills

Program Languages - Javascript/Typescript - Python - PHP - Java - C/C++/QT - C#	Frontend - React, Next.js, Svelt - Vue, Nuxt - Angular - React Native - JQuery - three.js	Backend - Node.js - Nest.js - Express.js - Django - FastAPI .Net (C#)	Database - MongoDB - PostgreSQL - MySQL - SQLite - MSSQL - DynamoDB
AI / ML - LLM Integration - Prompt Engineering - NLP (spaCy, NLTK) - Scikit-learn - AI System Design (async pipelines, job queues)	Cloud & DevOps - AWS - Docker - GitHub Actions - Nginx - Serverless Architecture - CI/CD Pipelines	CMS - Wordpress - Strapi - DirectUs - HubSpot - Payload CMS	Testing - Jest - Mocha - Cypress

Strengths

Advanced Features Development

Skilled in building complex systems: document automation, custom data filtering, email workflows, dynamic charts, and real-time experiences

AI & Intelligent Systems Development

Experience building AI-powered applications using LLMs, NLP techniques, and machine learning models. Skilled in designing prompt pipelines, implementing guardrails, and integrating AI into real-world products with a focus on reliability and user trust.

DevOps & Production Reliability

Hands-on experience with CI/CD, cloud infrastructure (AWS), monitoring, and deployment strategies to ensure high availability, performance, and maintainability in production environments.

Collaboration & Communication

Experienced in collaborating closely with design, product, and engineering teams, ensuring alignment and seamless project execution

Professional Experience

Full-stack developer, *Self Employed*

05/2024 – Present

- Built and deployed AI-powered healthcare assistant using LLM APIs with structured prompt pipelines and response validation
- Designed backend systems for real-time AI interactions, handling session state, latency optimization, and scalability
- Implemented AI-driven document processing and generation using structured templates and dynamic data inputs
- Developed serverless architectures (AWS Lambda, S3, DynamoDB) supporting scalable AI and content workflows
- Built real-time communication systems and integrated third-party APIs (Nylas, CMS platforms)
- Designed systems with focus on reliability, performance, and AI output quality control

Full-stack developer, *Vacationrenter*

09/2022 – 04/2024

- Developed the backend using Express.js and PostgreSQL, ensuring efficient and secure data handling
- Built a modern, responsive frontend using React, Redux, and Sass
- Implemented Google Maps features, adding location markers and interactive info windows to enhance user engagement and streamline the search experience
- Collaborated with cross-functional teams to identify and resolve technical challenges, improving application performance and user satisfaction
- Deployed to AWS EC2, integrated S3 bucket as asset storage
- Tracked and fixed bugs using Jira as a reporting tool
- Led development of \$500K research project which was deemed a "gold standard" by the client
- Fine-tuned and developed AI/ML-based algorithms based on the results with Scikit-learn, increasing revenue 2-fold

Full-stack developer, *Scalo*

07/2019 – 06/2022

- Developed a pet care application using React and React Native for the frontend and Python for the backend, delivering a responsive and intuitive platform
- Developed a modern, responsive frontend of CRM product using Nuxt.js, Pinia for store management, and Tailwind CSS to maintain a clean design system
- Designed and developed the company's intranet system, which incorporated the original time tracker. This was built with Node.js, React.js, Google, MongoDB, and more
- Engineered the backend using Express.js and MongoDB, leveraging both GraphQL and REST APIs to serve diverse application needs
- Developed a React Native Android app that helps farmers automate their production

Full-stack developer, *Future Processing*

02/2016 – 05/2019

- Maintained and improved the client portal React.js application.
- Implemented workflows and guidelines for code consistency, readability, maintainability, and testability.
- Conducted R&D (research and development) for libraries and ways to improve our codebase.
- Used jscodeshift (a JavaScript codemod toolkit) to make application-wide code changes to replace deprecated APIs and code syntax.
- Constructed middleware that allowed React.js to work with our proprietary model framework.
